Signatures ability to produce products that meet with the approval of the most discerning engineers, ensures that we can continuously improve our range and provide up-to-date tailor-made solutions.

In 2001, signature launched its LED Baselight shortly followed by the introduction of the LED Delta Signlight (See literature). In 2003, through continued development with our suppliers and customers, the Signature products offering LED options are now even better in providing both an effective and efficient method of illumination. With the increase in demand for improved performance, reduced installation costs, low maintenance and energy saving solutions, Signature have extended its research and development facilities thereby demonstrating its long term commitment to our customers for many years to come.

If you require specific information on either LED, Solar or Wind powered options, please contact our Manchester sales office.
