

# signature bollards

The Blow Moulded 270mm Multi-aspect Signature range of bollards, offer our customers the most up-to-date product available, both through its product design and innovation. The blow moulding process leaves the bollard with a smooth, non porous, easy clean surface finish without the need for a special anti-grime application that will deplete quite rapidly with today's cleaning methods/products.

Both the Rotational & Blow Moulded Bollards are available as baselit, reflective (10 year graphic guarantee) or translucent reflective material (12 year graphic guarantee)

---	---	--

Each bollard is date coded and fitted with a fully welded, galvanised steel fixing frame. Within the Signature range we offer the most durable, effective and illumination control available which are best complimented when used in conjunction with the Signature range of either the standard PL or LED Baselights plus any of the Signature conversion units available.

All signature bollards confirm to the prescribed luminance performance parameters as set out in the current British Standard BS873 and are UV stabilised to the relevant Kilo Langley.

Through active participation with the BSI, ARTSM and many other recognised governing bodies, Signature is able to guarantee that all products supplied conform to current prevailing standards.
