 250W, 400W   HIT   E40	IP66 (Optical compartment), IP54 (Control gear compartment)   EN 60598    6 joules glass, 20 joules polycarbonate bowl   		

A range of aluminium street lighting lanterns, designed to match the highest standards demanded in Europe, both in lighting performance, product quality and aesthetics.

Triumph 1

Triumph 2

In two sizes, with a power range from 70 to 600 watts, and with adjustable light distribution, the lantern can be used successfully - either post-top or side entry mounted - in a wide range of applications from city streets to major traffic routes.

## Style

Lighting the city demands more than just the functional provision of light to see by. The opportunity is available to embody the lighting equipment into the street scene design, and Triumph offers the designer a distinctively curved housing to blend in with the aesthetic style of the street scene. Simple mounting choices avoid the clutter of adaptors, and the choice of plain or painted versions allows the matching of colour systems employed in other street furniture. Lamp choice also offers white light options.

RAL colour painted

Flat glass

## Optical Performance

The Triumph has been designed to meet the requirements of the European code EN13201, which embodies new demands on the designer in terms of lighting performance. Most noticeable of these are new categories and standards for city lighting, reflecting the more complex needs of multi-purpose streets where, for instance, motorised, pedestrian, and cycle traffic are present. Triumph will offer you the achievement of the revised standard levels of lighting, the uniformity levels needed, and the restriction of glare.

### Intrusive Light

It is now widely accepted that a shallow bowl type lantern actually reduces the 'sky glow' which is a familiar and unfortunate feature of many towns and cities. (Please refer to the ILE Guidance Notes for the reduction of Light Pollution re-printed November 2000). All light pollution originates from light penetrating to unwanted areas, so precise control is required of any lantern which seeks to reduce the nuisance. Totally new optical systems are employed in Triumph to provide the fine control that is needed to meet the environmental demands of the city. Shallow bowls, with the softer cut-off, and the flat glass versions with stricter cut-off for extra sensitive areas, combine to offer you the choice of design tool. For highly sensitive areas, where an abnormal restriction of light distribution is required, a range of retro-fit blade louvres is available to fit inside shallow glass or shallow polycarbonate bowl types.

### Best Value

A performance lantern, constructed with re-cycling in mind, with the added facility of later modification to accommodate new types of lamps and control gear, and with built in style, must measure high on any scale of what represents best value. Triumph is not just a lantern to meet today's needs; this new product addresses both current and future standards, and is designed to give extended useful life through its 'futureproof' design values.

### Safety

Electrical safety is a prime requirement for all operatives, and Triumph offers total safety during all maintenance functions. The integral isolator device is activated each time the canopy is opened, and disconnects the mains supply from the circuit. Closure of the canopy re-connects the supply. During the maintenance operation the control gear set can still be tested electrically with the mains supply isolated.

*Mains isolated when canopy is opened*

# Triumph 1 and 2<sup>3:4</sup>

Updated August 2004

## Materials/Finish

Body and canopy: Re-cyclable pressure die-cast aluminium LM6 unpainted. RAL colour painted versions on request.

Toggle: Stainless steel.

Enclosures: Shallow, toughened glass curved bowl, toughened flat glass, shallow polycarbonate bowl.

Reflector: Anodised, high grade aluminium. Three versions: Size 0 for E27 lamps, size 1 for E40 lamps, size 2 for E40 lamps.

Spigot: Pressure die-cast aluminium.

## Installation/Mounting

Post top (76mm Ø or 60mm Ø) or side entry (42mm Ø or 60mm Ø) without the need for adaptor.

Spigot depth 100mm.

For post top mounting, adjustable tilt from 0° to 20° in 5° movements. Mains terminal block capacity 3 way, 2.5mm<sup>2</sup>.

## Specification

To specify state:

Street lighting lantern in die-cast aluminium (body and canopy) with top access to the lamp and gear compartment via hinged canopy. Optical compartment IP66 and gear compartment IP54. Suitable for 70W/100W/150W/250W/400W HPS-T, 70W/150W/CDM-TT, 42W TC-TEL, 600W HPS-T, 250W/400W HIT metal halide.

Post top or side entry mounting without the need for adaptor.

Automatic disconnection of the removable gear tray when canopy is opened.

As Thorn Triumph 1/2.
